Theory:

sorting is any process of arranging items systematically and has two common syst distinct meaning.

Ordering - Arranging items in a sequence ordered by some.

Criteria - : cutegorizing group item - with similar properties

edicine toping portroit to the

1. Insertion Sert.

Insertion Sout is a simple souting algorithm that works similar to the way you sont playing coods in your hands. The array is virtually split into a sorted and an Unsarted part. Value from unsarted part are picked & placed at the correct position in souted point.

2. Shell Sort.

Shell sort is just a variant of insertion sort. In Sertion sort we move elements only one position ahead when an element has to be moved for ahead many movements are involved the idea of shell sort is to allow exchange of for item. In shell sort we make.

Algorithm.

Algorithm for Input:

- 1. Take Empty list as list ...
- 2. Read the total Number of student and read the percentage of student.
- 3. if total Number is less than five with enter the Number greater than 5.
- 4. else Read the numbers of student.
- 5. Eltif percentuge is greater than 100 on less than zero then write involvid. percentage
 6. else Append all the percentage of student in list 8 write list.

	Date:	1	1	

Algorithm for Insertion sort.

- 1. Start.
- 2. Consider the first element of list 1 as sorted and other element as unswited, which is the contract of the contract of
- 3. intialize i=0 11th her strives
- 4. For range one to len (list):

4.1 Set current-element equal to list [i] and position equal

4.1.1 Take a while loop from current-element less than list[position-1] and position greater than o: 4.1.2 Then we will replace the list[position-1] to

list[position]

4.2 otherwise remain element position as it is 5. Write the insertion sort list.

Algorithm for shell sort !

- 1. Start . He dry la starte
- 2. intialize gap = len(1ist1)/12
- 3. While gap 20

1=0

for I in range gap to len (list1):

Intialize curren-element is equal to listlig and position as i

while current-element is less than list[position-gap] and position is greaters than gap do

Replace list[position] by list[position-gap]

if not then or emoun the element us it is

4. Write the shell sort list!

5. Step.

Date: / / Algorithm for main mene: 1. Steurt . 2. Insertion sent 2. call the insertion Sort function 10013 2.2 wnite the list1. 2.3 white the top 5 porcentage form list 1. 3. shed sept thanks promote proceed to the 3.1 call the shell sort function + 3.2 write the list, it to a grately 3 3 write the top 5 percentuge from list 1. 4. Stop. 1 1000 Il suprementation were stress and Pseudo code, alla accessorationes 1) Pseucolo code for Input. 1.115+1=[7 2. Read total No. of Student in Second years 3. Read the percentage of each student if percentage & 7100 or percentage co return -1 my grap status else Read the percentage 4. Append the each percentage in list 1 & write list1. 2) Pseuedo code for Insertion sort. 1, def Insention _ sort (list): for i in occupe 1 to len (list): current-element = list 18:7 position = 1 12 12 11 11 11
